We are live-tweeting the event and will be taking your infrastructure-related questions via Twitter. Please make sure to include our special event hashtag, #P3sRebuildRenew, with your questions.
Aon Infrastructure Solutions (AIS) is an Aon plc practice group dedicated to providing risk advisory services to participants in the public-private partnership (PPP) industry. AIS has developed PPP-specific benchmarking tools, processes, and innovative risk solutions to help its clients manage risk on PPPs. Our team is composed of risk advisors with wide-ranging expertise in risk management, corporate strategy, law, procurement, public policy, project finance, and project management. Based in North America and positioned globally, AIS collaborates with Aon PPP risk specialists on five continents.

The world needs cleaner drinking water, shorter commute times, more reliable energy sources, resilient infrastructure, and a healthier environment. CH2M was founded in Oregon nearly 70 years ago by three young engineers and their professor – Cornell Howland, Hayes and Merryfield. Through the years, we’ve evolved from a regional engineering and consulting firm associated with first-of-a-kind projects to a global leader associated with some of the largest, best-known infrastructure programs for public and private clients. We love to tackle complex challenges, and we know that our best solutions come out of close, trusted partnerships with our clients and the communities we touch. In 2014, the 25,000 men and women of CH2M worked with 5,000 clients in 50 countries to positively impact more than 10,000 communities. To learn more about CH2M’s people and projects, visit www.ch2m.com and connect with us on LinkedIn, Twitter or Facebook.

The National Association of Water Companies (NAWC) is the voice of the private water industry and the organization exclusively representing this group of quality water service providers, innovation drivers, creative financiers and responsible partners. Founded in 1895 by a handful of small water companies, today the NAWC has members located throughout the nation, ranging in size from large companies owning, operating or partnering with hundreds of utilities in multiple states to individual utilities serving a few hundred customers.

Private water companies have been providing quality service for centuries. These companies were built by men and women who engineered solutions and earned the public’s trust by treating and delivering a vital resource year after year. This commitment has endured through generations. Private water companies safeguard public health, promote environmental stewardship and deliver sustainable solutions, supporting the needs of nearly 73 million Americans every day.
